

JORGENSEN LINE AUTOMATION

Customized Line Automation

System integration

Maximum flexibility and performance with One Supplier Solution.

Benefit from our unrivalled experience and expertise in integration of new solutions with existing machines and equipment from subsuppliers.

Innovative automation solutions across all industries with integration of customized interfaces between the line controller and

customer MES. For third party equipment, flexible interfaces are integrated on OMAC PackTag structure.

Communication across units with central line safety controller for e-stop coordination ensures high safety standard.

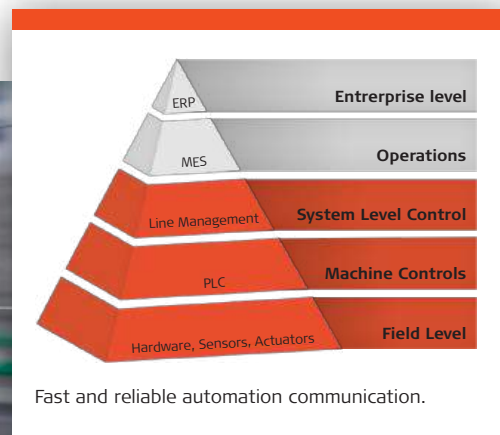

Intuitive user interface (HMI)

Customized solutions

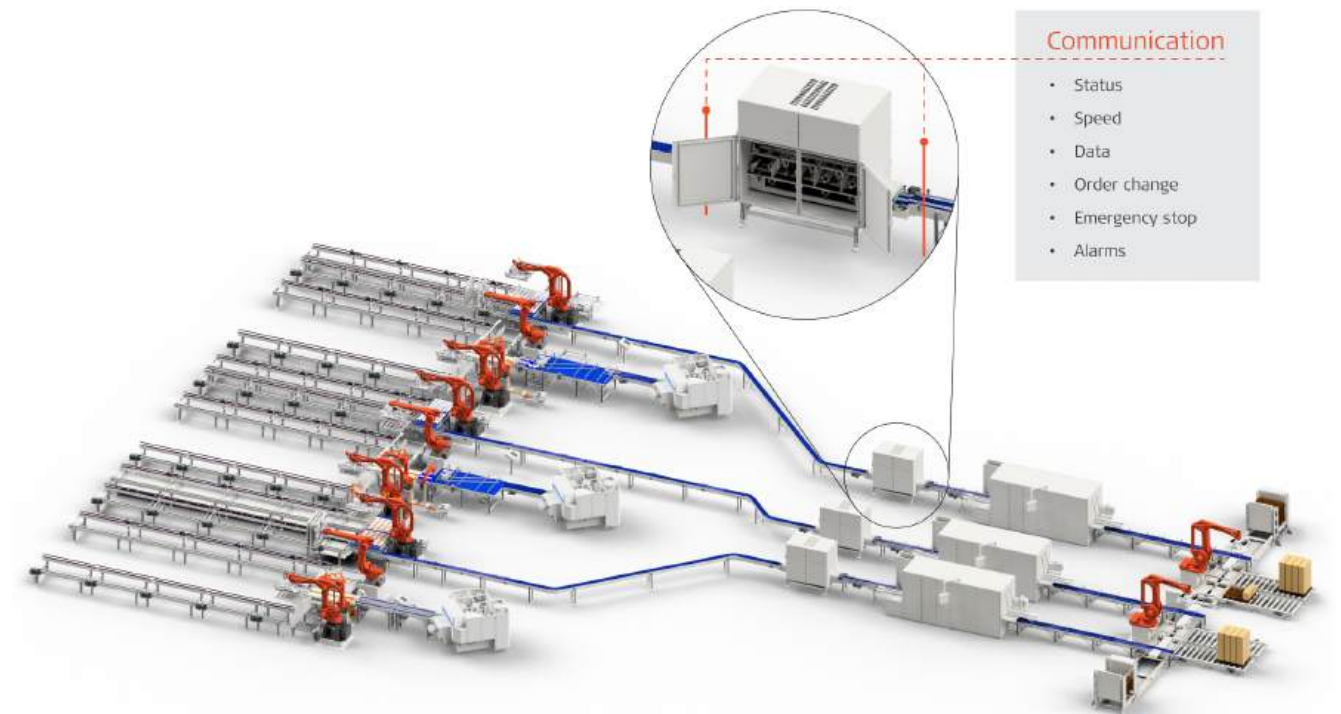

Our customized interfaces are based on PackML and communication protocols as OPC-UA and TCP/IP.

Safety, speed and production order control data is exchanged on line level between unit and line controller. An easily structured program with control modules and possibilities for reporting

counters, stop reasons, serialisation and aggregation - ensuring you a customized program. The possibility of RFID login and central user administration provides an easy and safe user login.

Improved efficiency and good manufacturing practise by tracking operator's HMI interactions.

In-house expertise

With great experience and know-how within packaging handlings solutions, we are line integration experts.

We guarantee up-to-date quality with our in-house production, automation engineering, software development, electrical control systems, commissioning and customer care.

Along with our simulation and emulation services, we ensure you increased efficiency and productivity with our One Supplier Solution. Assisting you in every step of your automation process with our long-standing line automation expertise.
